

ABLOY high-security locks are the result of almost 100 years of research and development. Invented in Finland in 1907, the unique patented rotating disc cylinder mechanism distinguishes ABLOY in the security marketplace.

ABLOY PROTEC

ABLOY

Bank on top security

This very same ABLOY mechanism can be found in bank vault doors. The unique and patented rotating disc cylinder design has no springs or pins to wear, jam or freeze. This lock is virtually impossible to pick or bypass and protects some of the most important buildings in the world.

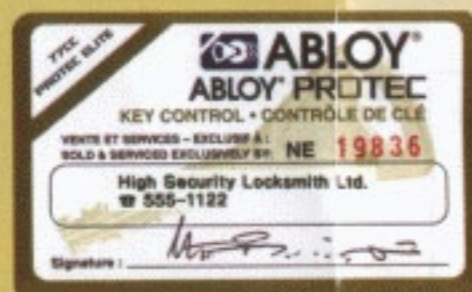

As distinctive as a fingerprint

With almost two billion distinct key combinations, ABLOY lock owners can be assured that there is no key combination like theirs. Each client's personal signature is registered at purchase to ensure that duplicate keys cannot be produced without their express permission. And for added convenience and versatility, each key is reverse-insertable in the up or down position.

Meet the next generation

The ABLOY PROTEC cylinder is the latest generation of the rotating disc cylinder mechanism and is protected by worldwide patents. Features such as DBS and Disc Controller add to the high security of this cylinder.

No keys without your signature and this card
Your personal signature is registered when you purchase this lock

Hardened steel cover plate
stops ice pick attacks
